

cloud 

The word 'cloud' is written in a large, blue, outlined font. To its right is a blue outline of a cloud shape.

cloud 

**UNION CLOUD** is a revolutionary system suitable for cleaning all types of textiles in a completely safe and ecological way.

Garments are placed into a controlled atmosphere chamber, within which a low temperature and low pressure steam cloud is created by special technology, allowing a delicate treatment on colors, but highly effective on the textile, without compromising the fibers in any way.

**UNION CLOUD** technology offers safe and effective cleaning for all garments and is suitable for wool, synthetic fibers, delicates and colors. Static electricity is virtually eliminated, therefore reducing the presence of lint on the garments at the end of the cycle.

**UNION CLOUD's** innovative technology with dry steam at low pressure has the effect of a hygienic treatment of garments leaving a clean, pleasant smell; cleaning in the absence of oxygen respects and re-

vives colors, avoiding oxidation. Inside the basket the garments move freely and lightly avoiding any creasing, making them ideal for simple and fast ironing.

The system is completely eco-compatible, without any unpleasant odors, or any toxic agents or flammable products. It's quiet, easy to install and to use in total safety.

**UNION CLOUD** can be easily installed and does not need to be fixed to the floor; the machine does not have a spinning phase and weight is kept to a minimum, making it ideal for placing onto surfaces which may not be completely flat or which cannot be drilled for holes. No spin phase also means no vibrations to the ground and no disturbance to neighboring areas. Maintenance is fast, simple and there are no toxic wastes to be disposed of.

**UNION CLOUD's** short cleaning cycle makes it ideal for high volume work at low costs.
