Fast. Smart. Clean.

UNION XL-XP 8000 SERIES

The Ideal Drycleaning System

Always we follow the path of excellence.

The XL-XP 8000 Series

Since it was founded in 1976 **UNION** has always been recognised as the industry bench mark by which all other manufacturers' machines are judged.

UNION's leadership is evident in the field of research and development of new products and processes and even more tangible in the high quality machinery production phase. All company functions are carried out by our dedicated skilled managers and a creative industrial team using the most sophisticated facilities resulting in a state of the art product.

The vast and modern company infrastructure of the **UNION** organisation includes CAD CAM planning offices, research and development centres and a production complex equipped with the most modern technology, such as automated laser cutting and welding equipment and a meticulous assembly plant and testing facility. Our in-house technical support and training centre is always ready to support our worldwide distributor sales network.

UNION's commitment to the quality and reliability of the company's products is based on a self-sufficient structure. More than 80% of components used in the construction of **UNION** machines are manufactured within the **UNION** organisation.

Every component produced is tested and certified to ensure the highest quality of **UNION** products. Today **UNION** Drycleaning machines can be seen in over 120 countries around the world, marketed and supported by over 275 authorised distributors.

At **UNION** we are aware of the responsibilities this primacy imposes on us, so with our total commitment to our products and constant attention to detail we will help your business to move ahead in terms of quality and profit by ensuring that our products are manufactured to the finest possible standard.

The Ideal Drycleaning System.

The achievements of a leadership which has lasted for 30 years are clearly reflected in the new **UNION XL** and **XP 8000 Series** machines.

Innovation and safety initiatives, leading to faster production, lower maintenance costs, reduced energy consumption, easy to use control devices and robust environmental protection. These are the characteristics which make the **UNION XL-XP 8000 Series** the ideal machine for the professional user

The XP and XL 8000 Series machines are the outcome of a project at the forefront of technology built on many years of research and development enclosing the most highly developed and productive machine within an extremely small footprint.

Think about shops where every last inch of space is vital. All of this translates into low installation and running costs while demonstrating new standards of quality and performance.

From the introduction of the **DIALOG** computer to the advanced **IDROMATIC** still cleaning system, always fully addressing our environmental responsibilities, the **UNION XL** and **XP 8000** give a new meaning to speed, efficiency and cleanliness. Whichever model you choose from the **XL** or **XP 8000 Series**, it will be the perfect system for you.

HISTORY

SAFETY

Superior Technology for Advanced Performance.

Advanced Technology for Ultimate Efficiency

The new **DIALOG** computer contains in its memory pre-installed programmes to respond to any type of cleaning process you need. These can easily be customised by the operator following a few simple instructions.

All system control parameters are constantly reported to the **DIALOG** computer's control panel in a clear and easily understandable way. The **DIALOG** computer features easy to read, simple to access menus, and continually displays the more significant operational data during the cycle, such as the elapsed time from the start and the time remaining to the end of the cycle, the inlet and outlet temperatures of the drum and much more information.

The new **DIALOG** computer permits you to store on the memory card every single programme parameter as well as periodical machine maintenance when required. All of the data and processing phases can be memorised in order, according to date and time, and can be stored on any personal computer for subsequent easy consultation and for the creation of tables of statistics to provide certification for the end user. All of the new **UNION XL-XP 8000 Series** are built with a comprehensive control panel for immediate reading of every work phase.

The more important components and the illuminated sight-glasses have been strategically placed to allow easy "at a glance" observation of the process.

The **UNION XL and XP 8000 Series** machines can be supplied with a range of solvent filtration systems to provide a perfect match to the requirements of their proposed working environment.

The rotary self cleaning filter disks are made of nylon and have a large surface area. They can be supplemented by high capacity active carbon decolouration filters to ensure effective filtration of the solvent resulting in extreme solvent purity during the cycle.

The **DIALOG** computer will automatically select the filter to be used according to the program chosen.

The original automatic **IDROMATIC** still cleaning system designed by **UNION** is capable of completely removing distillation residues from the still and transferring them to the still waste container.

Should the operator wish to open the still door, the solvent vapour in the still is passed over the refrigeration coils and removed from the air, thus avoiding operator exposure.

The automatic cycle of this extraordinary system will even clean the internal walls of the still without having to open the still door. The walls of the still are sprayed with a jet of solvent leaving the still completely clean and ready to continue its work without any manual intervention by the operator.

The new recovery circuit equipped with a high power ventilation system will drastically reduce drying time compared to models currently in the market.

For total protection of the refrigeration unit all models of the **XL and XP 8000 Series** are fitted with a double air filter which is easy to inspect and clean through access to one convenient panel.

The daily maintenance activities are made through a single panel which provides easy access to the air filters.

The new **UNION** models **XP & XL 8000 Series** are equipped with the **RECUPER** Active Carbon filter integrated into the system in order to save precious space. The **RECUPER** volume is sized according to the capacity of the machine.

The **RECUPER** functions automatically in the final stages of the cleaning cycle, removing the final traces of solvent vapour before allowing the loading door to be opened. This further avoids operator exposure to the residual solvent vapours within the machine.

Besides reducing the solvent consumption, the system will contribute to maintaining a healthier working environment without any unpleasant odours.

The loading door, made of an aluminium alloy, is conveniently large and has been given a safety locking system controlled by the **DIALOG** computer which prevents access to the machine before the end of cycle, allowing all residual solvent vapours to be completely removed from the clothes.

The loading door opening angle is maximised to ease the loading and unloading of clothes. The loading door and drum have been designed to optimise air flow within the cage allowing highly effective circulation of air thus enabling easy control of temperature and allowing a faster drying times and an efficient cooling system. Furthermore it is possible to rinse clean the back wall of the drum to remove lint, ensuring that peak performance is maintained throughout the long life of the machine. The careful design of the cage front will avoid buttons and other objects being damaged during the cycle.

New **UNION** innovations for a "winning plus" ideal.

The integrated control system **DIALOG** represents the interface proposed by **UNION** to optimise performance of our drycleaning machines. The large bright screen of the **DIALOG** computer displays all information regarding the functions of the programme and the condition of the machine components. The **DIALOG** computer is equipped with the useful "Programmed maintenance" facility which reminds the operator to carry out the very basic maintenance required to allow the machine to perform to perfection during every load. Today this revolutionary system is used on all new models of the **XL-XP 8000 Series**.

With the **DIALOG** system you can use the many memorised programmes and also modify them in part without having to rewrite the entire programme. This saves precious time and avoids tedious repetition. You can input and modify similar types of values for every single phase of every programme and once saved the **DIALOG** computer automatically remembers your chosen settings, faultlessly reproducing the same process cycle in exactly the same detail, guaranteeing consistency to a standard never previously achieved.

DIALOG permits the control and individual monitoring of every useful temperature during the cycle, drying temperatures, solvent temperatures including inside the still and even inside the still heating jacket. Also the cooling water temperature plus many more.

The **DIALOG** permits the start of the cycle to remain in pause until the correct pre-selected temperature has been reached, it will also permit the automatic selection and addition of the correct quantity of soaps and additives ..and with a single command you are given the option to manually prolong any step of the programme which you are using. Upon request the **DIALOG** system has at its disposal a number of different memory cards, enabling updates of system software or the copying of downloaded data from the work cycles, speedy entry of newly prepared programmes which are immediately ready to run on the machine saving precious time.

This is why today we call it **DIALOG**, tomorrow you'll call it indispensable.

The Ideal Drycleaning System.

UNION XP8010E, XL8010E, XL8010S Series, Space Saver. Fast, Smart, Clean.

Exceptional cleaning, economy and ecological performance is achieved in the new UNION XP8010E, XL8010E, XL8010S, available in a slim, portrait foot-print, perfect for workshops with limited floor space, or with two or three tanks on a larger front design.

UNION XL-XP 8010 models are designed to work with continuous distillation cycles or occasional distillation when required. An independent double circuit solvent filtration system is available.

The distillation can be steam fed or alternatively the machine can be supplied with a built-in mini boiler adequately regenerating the appropriate amount of cleaning solvent before the end of each cycle.

UNION XL-XP 8010 offer considerable reduction to occupied space. They also include all standard UNION innovations and exclusive technical features available in the UNION products.

DIALOG Computer for an easy to use drycleaning system. Convenient access to the generously sized double lint filters and to the external self drying button trap. The water separator is equipped with sight-glasses for easy inspection.

The Ideal Drycleaning System.

UNION XP8010E, XL8010E, XL8010S Series, Space Saver. Fast, Smart, Clean.

All Union models XP-XL 8000 Series are fitted with still maximum level sensors. The still level alarm is indicated in the DIALOG computer display.

To ensure adequate maintenance of the still, all models are available with the automatic cleaning system STILLMATIC.

Selecting the STILLMATIC programme discharges all still waste into the approved waste container without any contact with the operator since for daily maintenance opening the still door is not necessary.

Compact construction for easy access to the control board and all electrical components inside.

Rational and ergonomic machine configuration allows easy access to all components enabling fast maintenance. Nylon rotary Ecological disk filters can be combined with active carbon filters.

All models can be equipped on demand with ARTIC LINE refrigerator control system of the solvent temperature which is ideal when cleaning delicatés and leather clothes.

The RECUPER deodorisation system can be added to all Union models in the XL-XP 8000 series. Combining the action of refrigeration and the absorption power of Active Carbons, all odours from garments will be eliminated before removing them from the cage.

The Ideal Drycleaning System.

UNION XP8012E, XP8015E Series, Space Saver Fast, Smart, Clean.

UNION XP8012E, XP8015E Series, Space Saver Fast, Smart, Clean.

The UNION models XP8012E, XP8015E, of 12 and 15 kg loading are the ideal drycleaning machines for shops with limited space and are therefore also perfect for use as auxiliary machines to add to existing units and increase working capacity.

The UNION models XP8012E and XP8015E are designed to facilitate continuous distillation cycle processes. The still with its built-in boiler is able to return a wash of solvent before the end of the machine cycle, allowing repeat distillation loads to be run or allowing you to switch off the machine at the end of the cycle thus avoiding long delays waiting for the solvent to be returned from the still.

This feature will also be of use in special applications such as coin operated machines in laundrettes.

The UNION XP8012E and XP8015E systems include all the innovations and technical advances which are exclusive to the UNION XL & XP8000 Series enclosed within the smallest practical footprint.

All XP 8000 Series models are equipped with two independent self-cleaning solvent tanks equipped with level control sight-glasses.

The new button trap design, self drying to reduce solvent emission during maintenance operations, offers excellent protection for the solvent circulation pump during the cleaning cycle.

The Ideal Drycleaning System.

Phenomenal washing quality, excellent efficiency, consumption and performance and environmentally friendly.

Rational design for easy access to all components. The Nylon rotary filter disks can be supplied with an active Carbon decolourator filter. The carefully planned layout allows easy access to the air filters and to the button trap.

The automatic distillation system TURBO FAN is integrated into the IDROMATIC system.

The DIALOG computer will help you work more efficiently and will manage all UNION special features to even further improve machine performance.

The two stage gravity water separator is fitted with two level control sight-glasses.

The efficient and powerful refrigeration system is designed to improve drying performance while maintaining low energy and water consumption.

The RECUPER air purifying system is incorporated in the SMART models.

IDROMATIC automatic still cleaning system.

The air solenoid valves are conveniently located for ease of servicing when required.

High capacity well proven solvent pump.

The principal components are all manufactured in stainless steel, all pipelines are manufactured using brass and stainless steel components. The solvent security tray is built in heavy gauge galvanised steel.

The Ideal Drycleaning System.

UNION XL8012E, XL8012S, XL8015E, XL8015S Series, Space Saver Fast, Smart, Clean.

UNION XL8012E, XL8012S, XL8015E, XL8015S Series, Space Saver Fast, Smart, Clean.

Exceptional washing quality, excellent consumption performances and environment friendly, the UNION models XL8012E, XL8012S, XL8015E and XL8015S Series are fitted with two or three solvent tanks with a capacity of 12kg (XL8012E and XL8012S) and 15kg (XL8015E and XL8015S). The large loading door is built in aluminium. The revolutionary design of the washing cage and the advanced new air tunnel produces phenomenal drying results. For UNION models XL 8000 Series the technicians have developed a new, high efficiency drying tunnel to reduce the drying cycle, guaranteeing perfect results with a short process time and lower operating costs. The construction is compact, provides easy access to the front control panels and to all electrical and electronic internal components. The illuminated solvent sight-glass is placed on the front panel to show the solvent flow during the washing cycle and the general level of cleaning. All models XL8000 Series are built with new design independent and automatically self cleaning solvent tanks and level control sight-glasses.

The Ideal Drycleaning System.

Rational and ergonomic design for easy access to all components and for fast maintenance. One of the nylon rotary filter disks can be combined to active-carbon filters for improved cleaning performances. Comfortable access to the generously sized air and button trap filters. Loading drum with revolutionary design for exceptional drying results. Thanks to built-in flexibility the models XL8012E, XL8012S, XL8015E and XL8015S Series can be programmed to operate continuous distillation or occasional distillation as required. An independent double circuit solvent filtration system is available. Gravitational two stage water separator with level control sight-glasses available. Also available to this model is the self regenerating RECUPER deodorising system, built into the SMART Series, to minimize solvent emissions. All models are provided with inverter electronic control to regulate the speed of the cage rotation, increasing flexibility to clean fur coats and leathers. The main components are built in stainless steel and the critical pipelines in brass and stainless steel. Easy access is provided to the pneumatic valves to facilitate service if required. Well proven, high capacity solvent pump for best and fast cleaning process.

The Ideal Drycleaning System.
